FAISAL AHMED AWAD

AI GRADUATE | DATA ANALYSIS & PYTHON

Cairo, Egypt | +20 155 462 6634 | imfaisal1419@gmail.com
linkedin.com/in/faisal-ahmed-ai | github.com/Faisal-Pro | Portfolio: faisal-pro.github.io

PROFESSIONAL SUMMARY

Artificial Intelligence graduate (B.Sc., Cairo University, 2026) with hands-on experience in Python, SQL, Excel and Power BI. Built an end-to-end sales analytics app (SQLite database, Python desktop app, Power BI dashboard) and extended a Django school platform with an XGBoost early-warning model (ROC-AUC 0.95) and OpenCV face recognition. Currently working in data operations, cleaning and validating records. Seeking a junior role in data analysis or Python / AI development.

WORK EXPERIENCE

Data Entry Specialist — Data Operations Implementation Management — 2026 – Present | Cairo, Egypt

- Enter and process operational records in internal databases with high accuracy and consistent formatting.
- Clean, structure and validate raw datasets using Excel and SQL queries; run routine checks to catch errors early.

EDUCATION

Bachelor of Science in Artificial Intelligence — Graduated: 2026

Faculty of Computers and Artificial Intelligence, Cairo University

PROJECTS

Smart Sales Analytics App — 2026

Python, SQLite, CustomTkinter, Matplotlib, Power BI | Source code on GitHub

- Built a desktop app to manage products, customers and sales; stock is deducted in the same transaction as each sale, so items cannot be oversold.
- Designed a SQLite schema with foreign keys, check constraints and indexes, and stored the cost at the time of each sale so historical profit stays accurate.
- Implemented CSV import with row-level validation and error reporting, CSV export, revenue / profit / margin analytics with charts, and automated tests on an isolated database.
- Connected the database to Power BI (ODBC) and built an interactive dashboard: KPIs, trends over time, top products and customers, low-stock table.

Smart School Management & Academic Risk System — Graduation project 2025–2026

Django, SQLite, XGBoost, OpenCV | Source code on GitHub

- Django platform for four roles (admin, teacher, student, parent): courses, grades, attendance, quizzes, homework, announcements, plus OpenCV (LBPH) face login and attendance with 1:1 verification.
- **Risk prediction:** XGBoost model estimates each student's probability of failing a course; evaluated with a split by student (accuracy 0.88, recall 0.83, ROC-AUC 0.95). Teachers get a per-course list ranked by risk.
- **My contribution (team project, extended after graduation):** access control, password hashing and login lock, model evaluation, face-recognition hardening, admin tools, automated tests, demo data and documentation.

TECHNICAL SKILLS

Data & Analytics:	SQL, SQLite, Power BI (dashboards, ODBC), Advanced Excel, Pandas, NumPy, Matplotlib, Data Cleaning, Data Visualization
Machine Learning:	scikit-learn, XGBoost, OpenCV, deep learning fundamentals (ANN, CNN)
Programming & Web:	Python, Django, Database Design, Automated Testing, C++, JavaScript, HTML5/CSS3, Git & GitHub
Other:	Linux basics, Cyber Security fundamentals, Data Quality Control, AI-assisted development
Languages:	Arabic (Native), English (Professional Working Proficiency)

CERTIFICATIONS & TRAINING

- **Artificial Intelligence & Data Science Diploma** — Xperience Academy (150 hours): Python, statistics, Pandas, machine learning, deep learning, computer vision.
- **Cyber Security (HCIA)** and **Linux Administration** training — Huawei ICT Academy & Cairo University (Aug 2024).
